

UNIVERSITY CERTIFICATE IN PYTHON FOR ALGORITHMIC TRADING

MASTERING AI-POWERED ALGO TRADING

AI-FIRST FINANCE & TRADING

We are living in the age of artificial intelligence and of algorithms taking over many areas in our life. These trends are well illustrated in the field of algorithmic trading of financial instruments.

The ability to process tons of data and to implement trading strategies that generate alpha in the form of automated algorithms is key in this field. Due to its expressive syntax and powerful ecosystem of data analytics packages, Python ranks among the top programming languages in the algorithmic trading industry.

Almost all leading hedge funds make use of Python as a strategic element of their IT architectures. Some of the biggest banks in the world manage their trading and risk operations based on systems primarily implemented in Python.

The field offers exciting opportunities for those intending to build their own AI-based algorithmic trading business or those striving to land a job with one of the leaders in the industry.

COMPREHENSIVE PROGRAM

We at The Python Quants Group teach Python for Algorithmic Trading since many years. Based on the experience from numerous online and live training classes and programs, we have compiled a unique program that teaches you all the relevant Python elements, approaches and techniques to implement and deploy your own automated, algorithmic trading strategies. Among others, the program covers the four online trading platforms from FXCM (<https://fxcm.com>, for FX & CFD trading), Oanda (<https://oanda.com>, for CFD trading), Interactive Brokers (<https://interactivebrokers.com>, for stock trading) and Gemini (<https://gemini.com>, for cryptocurrency trading).

The classes and elements of the program include the following:

Finance with Python (6h): an introduction to finance from basic principles and a gentle introduction to Python basics based on a documentation with more than 170 pages as PDF

Python for Financial Data Science (20h): with the 2nd edition of our Python for Finance (O'Reilly) book coming out in late 2018, this central class is based on an updated code base

Python for Algorithmic Trading (50h): this online class is at the core of the program and is based on a documentation with about 470 pages as PDF and over 3,000 lines of Python code

AI & RL in Finance (25+h): one class focuses on deep learning techniques for market prediction, building neural networks from scratch and applying packages such as Keras; another class focuses exclusively on reinforcement learning for trading

Tools & Skills (20h): these classes cover important topics in setting up a Python environment, using Python and Linux development tools as well as selected best practices in coding

Tutorials (15h): exercises and test projects of different difficulty levels allow you to gain more practice and to test your skills

Add On Material (30+h): the Python for Databases class covers SQL and NoSQL technologies; the Python for Excel class combines the analytical power of Python with Excel; the NLP class introduces techniques for language processing

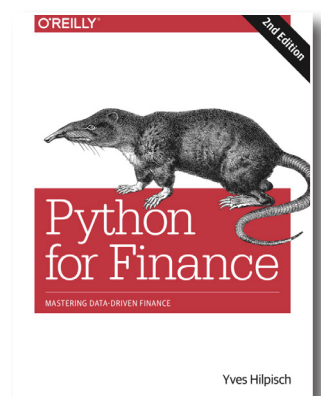

Practice Modules: program delegates take part in three practice modules, one about backtesting trading strategies and two about live trading and deployment

UNIVERSITY CERTIFICATE

The Python Quants Group has designed a unique online training program leading to the first University Certificate in Python for Algorithmic Trading. The Certificate is awarded in cooperation with the htw saar University of Applied Sciences, Germany (<http://htwsaar.de>).

Applied Sciences

PROGRAM DIRECTOR

Dr. Yves J. Hilpisch is founder and CEO of The Python Quants (<http://tpq.io>), a group focusing on the use of open source technologies for financial data science, artificial intelligence, algorithmic trading and computational finance. He is also founder and CEO of The AI Machine (<http://aimachine.io>), a company focused on AI-powered algorithmic trading.

He is author of the books:

- Artificial Intelligence in Finance (project, O'Reilly)
- Python for Algorithmic Trading (project, O'Reilly)
- Python for Finance, 2nd ed. (O'Reilly)
- Derivatives Analytics with Python (Wiley)
- Listed Volatility and Variance Derivatives (Wiley)

He has written the financial analytics library DX Analytics (<http://dx-analytics.com>) and organizes conferences, bootcamps and Meetup events about Python for finance and algorithmic trading in Frankfurt, Berlin, Paris, London and New York. He has given keynote speeches at technology conferences in the United States, Europe, India and Asia.

“... training should focus on doing rather than on knowing.”

Anders Ericsson, Peak — Secrets from the New Science of Expertise.
